Background and Context

Introduction

This document outlines the complete requirements for building a secure Salesforce Experience Cloud Partner Portal for Find A Home Care. The portal is designed to enable healthcare providers (users) to manage referrals, update facility/agency information, and access a chat feature for assistant support. It is based on the provided Statement of Work (SOW) and aligned with the systems and Salesforce implementation requirements document, focusing on the Experience Cloud components. Key fields in referrals have been aligned with lead capture forms (e.g., Category, Location, Inquiry For, Names, Contact Details, Message) to ensure consistency across the ecosystem. The portal must integrate with the underlying Salesforce data architecture (e.g., Lead → Referral → User Account model) and adhere to security, compliance (including HIPAA for PHI), and accessibility standards.

The portal will be built using Salesforce Experience Cloud features, including the Experience Builder for page layouts, Lightning components for interactive elements, and standard objects for data handling. No custom Apex code or external integrations are required unless specified. The goal is to provide a user-friendly, secure interface for providers to interact with assigned data without exposing sensitive PHI outside of Salesforce.

Scope

In-Scope

- Development of a secure Partner Portal using Experience Cloud.

- **Referral Management:** Viewing assigned referrals (with fields aligned to lead forms), updating outcomes, and submitting monthly revenue.
- **Facility/Agency Profile Management:** Updating service details, profiles, and contact information.
- **Chat Feature:** Real-time chat with support assistants.
- **Security & Compliance:** Role-based access, audit trails, compliant data sharing, and HIPAA protections.
- Integration with Salesforce core objects (e.g., Accounts, Contacts, Referrals, Leads) for real-time data access.
- Accessibility compliance to WCAG 2.1 AA.
- Basic navigation, dashboard, and list views for providers.

Success Metrics

KPI	Definition	Target
Provider Adoption Rate	% of invited providers who log in at least once per month	≥ 85% within 90 days
Referral Response Time	Avg. time from referral assignment to first provider action	< 24 hours
Referral Completion Rate	% of referrals moved to "Assessment Scheduled" or "Start of Care"	≥ 60%
Monthly Revenue Submission Compliance	% of providers submitting revenue on time each month	≥ 95%
Chat First Response Time	Avg. response time for provider chat inquiries	< 5 minutes
Profile Data Completeness	% of provider profiles with all required fields completed	≥ 90%
System Uptime	Portal availability excluding	≥ 99.9%

	scheduled maintenance	
Audit Trail Coverage	% of required actions logged with timestamp + user	100%

User Stories and Use Cases

User Roles

- **Provider User:** Read/Write on assigned Referrals, own Account profile, and access to Chat.
- **Admin (Internal):** Full access for oversight.

Permissions

- Use **Permission Sets** and **Profiles** for **granular control**, including chat permissions.

User Stories

Provider User Stories		
As a...	I want to...	So that...
Provider	View my assigned referrals	I can quickly respond to new inquiries
Provider	Update referral outcomes	Care Indeed can track conversion status
Provider	Submit monthly revenue	Payments and reporting stay accurate
Provider	Edit my agency profile	Clients receive accurate service info
Provider	Upload a logo and photos	My agency appears professional
Provider	Use chat support	I can resolve issues without calling
Provider	Reset my password easily	I don't get locked out of the portal
Provider	Verify my profile with no changes	Compliance audits show validation
Internal Admin Use Cases		

As an...	I want to...	So that...
Admin	Audit provider activity	HIPAA and revenue compliance is enforced
Admin	Monitor referral performance	Provider quality can be evaluated
Admin	Review chat transcripts	Support quality is maintained
Admin	Enforce permissions	No provider sees unauthorized data

Risks

Risk	Impact	Likelihood	Owner
Misconfigured sharing rules	PHI exposure	Medium	Salesforce Admin
Incomplete field history tracking	Audit failure	Medium	Compliance
Provider license mismatch	Feature blockage	Low	Admin
Poor mobile experience	Low adoption	Medium	UX
Chat support understaffed	Provider frustration	Medium	Operations
Revenue submission errors	Billing disputes	Low	Finance
Accessibility violations	Legal exposure	Low	QA
Decision Log			

Implementation checklist

Date	Decision	Rationale / Implication	Owner
TBD	Experience Cloud Partner Portal selected	Supports external providers with role-based access	Product
TBD	No custom Apex initially	Reduces risk and maintenance overhead	Engineering
TBD	Referral names anonymized	HIPAA compliance for PHI	Compliance

TBD	Autopay requires no physical proof	Operational efficiency	Finance
TBD	Chat embedded via Salesforce	Keeps PHI within Salesforce	IT
TBD	WCAG 2.1 AA enforced	Legal and accessibility compliance	QA
Release Plan			

Functional Requirements

1. User Authentication and Access

- Providers must log in via a secure Experience Cloud login page, integrated with the WordPress site (e.g., via a CTA button).
- Use self-registration or admin-invited user creation for provider accounts.
- Role-based access:** Providers can only view and edit data assigned to their agency/account.
- Support for external users with Community User licenses.
- Ensure the authentication process supports a clear 'Forgot Password' flow, leading users through email verification and password reset
- Include a 'Remember Username' checkbox on the login interface to enhance the user experience for returning providers.

2. Dashboard/Home Page

- Upon login, display a personalized dashboard showing:**
 - Summary of assigned referrals (e.g., count of new, in-progress, completed).
 - Quick links to Referral Management, Profile Management, and Chat sections.
 - Key metrics like total revenue submitted or pending updates.
- Use Lightning Record Pages or custom Experience Builder pages.

3. Referral Management

- Providers can view a list of assigned referrals (filtered by their account/agency), with fields aligned to lead capture forms.
 - List view columns**
 - Referral ID
 - Inquiry For (e.g., Myself, Parent, Spouse, Other)
 - First Name (anonymized for PHI)
 - Last Name (anonymized for PHI)
 - Email
 - Phone
 - Category (e.g., Care Needs)
 - Location (e.g., ZIP Code)

- 9. Message/"What Are You Looking For?"
- 10. Status
- 11. Assignment Date
 - Sorting and filtering options (e.g., by status, date, category, or location).
- **Update referral outcomes:**
 - Dropdown options: Contacted, Assessment Scheduled, Start of Care, Declined.
 - Additional fields: Notes, Date of Update.
 - Validation: Required fields for updates; prevent editing after certain statuses.
- **Submit monthly revenue:**
 - Form to input revenue amount related to referred users.
 - Fields: Referral ID, Month/Year, Revenue Amount, Supporting Notes.
 - Submission triggers update to Salesforce records (e.g., custom Revenue object linked to Referral).
 - ~~The submission form includes a selection for 'Autopay' as a payment mode; no additional physical proof of revenue is required for the submission. Autopay pulls data from the monthly revenue fields to automatically charge the partner agency;~~
- Use Lightning Data Table for lists and Lightning Record Forms for edits.

4. Facility/Agency Profile Management

- View and edit agency profile tied to the provider's Account record.
- **Editable fields:**
 - Service Offerings (multi-select picklist: e.g., Home Care, Nursing, Therapy).
 - Rates (currency fields for different services).
 - 1. Add granular rate fields including On-Call Rate, Overnight Hourly Rate, Weekend Services, and toggles for Live-in Care offered and Deposit Required.
 - Provide a selection field for Provider Pay Methods (e.g., Credit Card, ACH, etc.).
 - Availability (checkboxes or picklists for days/hours).
 - Service Areas (multi-select picklist of ZIP codes or regions).
 - Include fields for Languages Spoken, Caregiver Screening status, and Caregiver Certification levels
 - Profile Description (rich text area).
 - Implement a Photos/Logo Management feature allowing providers to upload a new logo or photos, preview the images, and clear/delete the photos.
 - Operational Details (text fields for additional info).
 - Contact Information: Phone, Email, Address.
 - Business Hours: Time pickers for open/close times per day.
- **Validation rules:** Ensure required fields are filled; format checks for phone/email.

- Use Lightning Record Pages configured for edit mode.
- Implement a 'No Changes' confirmation button on profile update pages; if a user reviews their data but makes no edits, the system should log a 'verified with no changes' timestamp in the audit trail.

5. Chat Features

- Embed a real-time chat widget accessible from the dashboard and other pages for providers to communicate with support assistants (human or AI-powered).
- **Features**
 - Live messaging with typing indicators and message history.
 - Support for text-based queries related to referrals, profiles, or general assistance.
 - Optional file attachments (ensuring PHI compliance).
 - Integration with Salesforce Service Cloud to create cases from chats if needed.
 - Availability indicators for assistants (e.g., online/offline status).
- Implement using Salesforce Chat (formerly Live Agent) or Einstein Bots embedded in Experience Cloud.
- Ensure all chat data is stored securely within Salesforce and complies with PHI regulations.

6. Reporting & Audit

- **Basic reports accessible via the portal:** Provider performance (e.g., referral completion rate, revenue trends).
- **Audit trail:** Log all updates with timestamps and user info (using Salesforce standard auditing).

Non-Functional Requirements

Security

- **Role-based visibility:** Use sharing rules and profiles to restrict data to assigned records only.
- **PHI Compliance:** Ensure all data flows and storage remain within Salesforce; no external exports. Align with HIPAA requirements including consent timestamps.
- **Encryption:** Use Salesforce Shield or standard encryption for sensitive fields.
- **Authentication:** Enforce MFA if possible; session timeouts.

Compliance

- **WCAG 2.1 AA:** All pages must support screen readers, keyboard navigation, color contrast, alt text for images.
- **Audit Configuration:** Enable field history tracking on key objects (Referral, Account). Include logging for timestamp, IP, and consent status where applicable.

Performance

- Page load time < 3 seconds.
- Support up to 500 concurrent users (scalable via Salesforce)
- Mobile responsiveness: Fully functional on desktop, tablet, and mobile.

Usability

- Consistent UI/UX aligned with Find A Home Care branding (use themes in Experience Builder).
- **Intuitive navigation:** Sidebar menu with sections for Dashboard, Referrals, Profile, Chat, Reports, Logout.

Data Model Integration

- **Leverage existing Salesforce data architecture**
 - **Referrals:** Custom object linked to Leads/Accounts, incorporating fields from lead forms (e.g., Category, Location, Inquiry For, Message).
 - **Ownership Window:** Logic to assign referrals to providers (handled in core Salesforce, visible in portal).
 - **Revenue Reconciliation:** Custom object for monthly submissions.
 - **Attribution:** UTM parameters not directly in portal but ensured in backend (e.g., utm_source__c, utm_medium__c, etc.).
- **Objects Involved**
 - Account (for Agency/Profile).
 - Contact (for Provider Users).
 - Referral__c (custom object).
 - Revenue_Submission__c (custom object).
 - Lead (for referral source data, with fields like HIPAA_Consent_Timestamp__c).
 - Chat-related objects (e.g., LiveChatTranscript for chat history).

User Interface and Design

Figma Link

Prototype

Mockups

Below are some example mockups sourced from similar Salesforce Experience Cloud implementations for healthcare provider portals, including those with chat features. These can serve as inspiration for the layout and features. [**Note that actual builds should use Experience Builder to customize.**](#)

Referral Management

Facility/Agency Profile Management

The image shows a computer monitor displaying the FindAHomeCare Facility/Agency Profile Management interface. The interface is a web-based form with a white background and blue accents. The top navigation bar includes the FindAHomeCare logo and links for Dashboard, Referrals, Profile (active), and Help. The main heading is "Facility/Agency Profile Management".

The form is organized into several sections:

- Basic Details:** Includes fields for Facility Agency Name, Main Contact Person, Main Contact Person Email, and a dropdown for Permissions. There are buttons for "Previous" and "Next".
- Account Settings:** Includes fields for Billing Email (Payroll Method), Phone Number, and a button for "Manage Payment".
- Address & Service Area:** Includes fields for Street, City, and ZIP Code. There are dropdowns for "City/Province" and "State Area (HMA - FMA)".
- Services Offered:** Includes checkboxes for Skilled Nursing, Personal Care, Therapy, Hospice, and Respite Care. "Skilled Nursing" is checked.
- Billing Information:** Includes fields for Username and a dropdown for "Manage Payment (On File)".
- Login Credentials:** Includes fields for Username and a checkbox for "Enable Two-Factor Authentication".

At the bottom of the form, there are buttons for "Save Changes" and "Cancel".

Testing Plan

Outline the testing strategies, criteria for acceptance, and the process for quality assurance

Implementation Guidelines for Salesforce Admin

- **Use Experience Builder to create pages:** Drag-and-drop components like Record List, Record Detail, Form, and Chat Embed.
- Test for accessibility using Salesforce's built-in checker.
- Deploy in a sandbox first, then to production.
- **Estimated Effort:** 80 hours for portal + 30 hours for profile management (per SOW); additional 20 hours for chat integration.

This document provides a complete blueprint. Any changes should follow the SOW's change management process.

Testing Strategies

- **Unit Testing:** Verify individual Lightning Components (e.g., the autosave revenue field and the "No Changes" button) function correctly in isolation.
- **Functional Testing:** Ensure end-to-end workflows, such as lead-to-referral conversion and revenue submission triggers, work as documented in the Salesforce data model.
- **User Acceptance Testing (UAT):** Real-world scenarios performed by "Provider Users" to validate that the interface is intuitive and meets their daily needs.
- **Security & Compliance Testing:** Rigorous validation of role-based access to ensure providers *only* see data assigned to their agency and that PHI remains encrypted and within Salesforce. Special attention paid to Care Indeed's access as they are not administrators of FindAHomeCare.
- **Regression Testing:** Performed during the "Buffer Sprint" to ensure new chat integrations or profile fields don't break existing referral management features.
- **Accessibility Testing:** Use Salesforce's built-in checker to verify WCAG 2.1 AA compliance, focusing on screen readers and keyboard navigation.

Acceptance Criteria

Category	Test Case	Acceptance Requirement (The "Go" Condition)

Authentication & Access	Provider Login & Data Isolation	Users must log in via a secure page; the system must enforce role-based access where providers see <i>only</i> their agency's data.
Authentication & Access	User Experience Features	The "Forgot Password" flow must successfully trigger email verification , and "Remember Username" must persist for returning users.
Referral Management	PHI Protection & Data Visibility	List views must display assigned referrals with First and Last Names anonymized to protect PHI.
Referral Management	Outcome Updates	Users must be able to select outcomes (e.g., "Contacted," "Start of Care") , and the system must prevent editing after specific statuses are reached.
Revenue Tracking	Revenue Submission & Autosave	The revenue form must autosave when the user clicks out of a field and provide a visual confirmation notification.
Revenue Tracking	Autopay Integration	Selecting "Autopay" must correctly pull data from monthly revenue fields to charge the partner agency automatically.

Profile Management	Media & Branding	Providers must be able to upload, preview, and delete agency logos or photos without errors.
Profile Management	Audit Trail Integrity	Clicking the "No Changes" button must log a "verified with no changes" timestamp in the audit trail.
Profile Management	Granular Rate Configuration	Validation must ensure all rate fields (On-Call, Overnight, Weekend) and pay methods are correctly formatted and saved.
Communication	Real-Time Chat Functionality	The chat widget must show typing indicators, maintain message history, and create Service Cloud cases when needed.
Compliance & Performance	Accessibility (WCAG 2.1 AA)	All pages must pass the Salesforce accessibility checker for screen readers and keyboard navigation.
Compliance & Performance	System Load & Speed	Page load times must remain under 3 seconds while supporting up to 500 concurrent users.
Compliance & Performance	Security Auditing	Field history tracking must be enabled for Referral and Account objects, logging timestamps, IPs, and consent status.

Quality Assurance Process

To reach these "Go" conditions, the following QA process will be executed:

- **Sandbox Validation:** All functional components, specifically the custom autosave and audit triggers, are tested in a sandbox before production deployment.
- **Security & Compliance Audit:** A rigorous review to ensure no PHI is exported and that HIPAA-required consent timestamps are accurately captured.
- **Regression Testing:** Conducted during the "Buffer Sprint" to confirm that profile management updates do not disrupt existing referral workflows.
- **User Acceptance Testing (UAT):** Real-world scenarios will be validated by "Provider Users" to ensure the interface is intuitive for daily agency operations.

Risks

Outline the risks with the project (pre and post launch)

Pre-Launch Risks (Development & Implementation)

These risks threaten the timeline, budget, and fundamental integrity of the platform before it ever reaches a user.

- **HIPAA Compliance & Data Privacy Gaps:** The most critical risk is a failure to properly configure Salesforce to protect PHI. Misinterpretation of privacy rules can lead to unauthorized access or non-compliant data exports.
- **Data Integration Complexity:** If existing Lead and Account data is "dirty" or improperly formatted, the real-time sync between core Salesforce and the Experience Cloud portal will fail.
- **Incomplete Security Testing:** Failing to rigorously validate role-based access during the sandbox phase could allow Agency A to accidentally view Agency B's data at launch.
- **Licensing Overlooked:** Selecting a Community User license tier that does not support necessary custom objects (like `Referral__c` or `Revenue_Submission__c`) can block development late in the cycle.

Post-Launch Risks (Operations & Growth)

These risks impact the return on investment (ROI) and the long-term success of the portal once it is live.

- **Low User Adoption:** Even if technically perfect, the portal fails if providers find it unintuitive and revert to email or phone calls to manage referrals.
- **Security Breach (PHI Leakage):** Ransomware or credential theft remains a constant threat. Without Multi-Factor Authentication (MFA) and rigorous session timeouts, sensitive patient data is at risk.

- **Audit Trail Failures:** If the system fails to log a "verified with no changes" timestamp or HIPAA consent markers, the agency faces significant legal and financial liability during an audit.
- **Chat Support Availability:** If the real-time chat feature is launched without a clear support strategy (e.g., human vs. AI availability), it can lead to provider frustration and negative feedback.

Mitigation Summary

Risk Category	Mitigation Strategy
Security	Implement Salesforce Shield and enforce MFA for all provider logins.
Compliance	Conduct a dedicated HIPAA audit during the "Buffer Sprint" to verify encryption.
Adoption	Involve "Provider Users" early in UAT to ensure the UI matches their workflow.
Performance	Use Scale Center to stress-test the environment for up to 500 concurrent users.

Decision Log

Keep a detailed log of decisions made throughout the project, including the rationale and implications of each decision

Date	Decision	Rationale/Implication	Owner

Release Plan

List of milestones and dates

Phase	Estimated Time	Deliverables
Phase 1: Requirements & Design		
Phase 2: Development		
Buffer Sprint		HIPAA Audit
Phase 3: Testing & QA		
Phase 4: Launch		

Go-to-Market Strategy

Target Audience

- Existing partner agencies
- New referral partners onboarded via Find A Home Care

Rollout Strategy

- Soft launch with 5–10 providers
- Feedback loop during first 30 days
- Full rollout after issue remediation

Enablement

- Email onboarding sequence with login instructions
- Short portal walkthrough video
- In-portal tooltips for first-time users

Success Measurement

- Adoption rate
- Referral response time improvement
- Reduction in email-based referrals
- Chat usage vs. phone/email support

Final Assessment (Straight Talk)

You already have:

- Strong scope definition
- Excellent functional depth
- Clear HIPAA awareness

What was missing:

- Metrics
- Ownership
- Decisions
- Release discipline
- GTM thinking

With the above additions, this PRD is **implementation-ready** and defensible in front of:

- Salesforce partners
- Compliance
- Legal
- Executive leadership

If you want, next step I recommend:

- A **1-page executive summary**
- Or a **Salesforce Admin build checklist** mapped 1:1 to this PRD
